NOW THEREFORE, in order to promote the health, safety, and welfare of the people of Hendricks County, Indiana, by regulating the installation of sewage systems.

BE IT ORDAINED by the Board of Commissioners of Hendricks County, Indiana, that Section IV - Exemption, Provision B., of the Hendricks County On-Site Sewage Disposal Ordinance No. 9, 1982, enacted by the Board of Commissioners of Hendricks County, Indiana on July 19, 1982, and all amendments thereto, which reads as follows:

B. In developments approved prior to December 18, 1977 conventional septic systems will be allowed. However, an on-site inspection may be made by the Hendricks County Health Officer or an agent prior to the issuance of sewage disposal permit to determine the best know on-site sewage disposal system available. The property owner will be contacted and advised of the Health Department findings. If the Health Department recommends an alternative system and the property owner chooses to install a conventional system, the property owner must sign a letter releasing the Health Department from any responsibility if the conventional system fails. The letter must be signed prior to issuance of sewage disposal permit for anyone utilizing a conventional septic system within a severe rated soil.

All subdivisions that have received only preliminary approval prior to December 18, 1977 will be required to meet all current sewage disposal standards at the time of final approval.

Subdivisions which have had final approvals for some sections and have remaining sections pending final approval may be considered for waivers from final design standards which create extreme engineering, construction and/or economic hardship.

Be amended to read as follows:

B. In developments approved prior to December 18, 1977 conventional septic systems will be allowed. The Health Department will work with property owners to explain the existing soil conditions, to educate them on the proper maintenance of sewage systems, and to recommend alternative sewage systems if applicable.

THAT, said Ordinance be further amended by amending Section V, J. which reads as follows:

J. Sizing absorption fields for commercial or industrial uses shall be determined by the standards of the Indiana State Board of Health.

1. Minimum square footage of the absorption field shall be 450 square feet per bedroom.
2. Each system will be designed into two (2) separate fields utilizing a splitter box, which will allow the fields to be alternating.
3. Each separate field will be designed and constructed in a loop method.
4. The bottom of the absorption field shall be constructed eighteen to twenty-four (18-24) inches below the finished grade.
5. Perimeter drains shall be installed around the absorption field according to the current design and installation practices.
6. Excessive scraping and/or removal of topsoil in the area of the absorption field is strictly prohibited.
7. The finished grades shall be established in order to provide positive surface drainage away from the absorption field and erosion control measures will be followed in order to stabilize the area over and around the absorption field.
8. The project engineer and/or land surveyor must state the soil type found in the area of the absorption field on the lot, state any limitation and certify that his design will overcome the limitations if the system is properly installed and operated.
9. The final design shall include detailed information pertaining to the septic tank location and elevation, the absorption drainage location and elevation, perimeter tile location and elevation, finished lot grade and finished pad grade.

AND, that said Ordinance be further amended by amending Section V, K. which reads as follows:

K. On any new lot or parcel proposing to utilize an on-site sewage disposal method within a severe rated soil there should be a disposal system designed and installed to overcome the limitations of the soil. The following minimum requirements are based on the current technology necessary to satisfy the provisions of Section III, General Requirement Subsection E of Indiana State Board of Health Rule 6-8 and it must be recognized that they do not displace the obligation and responsibility of the engineer or land surveyor to design a system to overcome the limiting factors of particular site. Consistently changing technology, based upon additional research, may dictate additional requirements to overcome the limiting factor found in certain soils. However, it is recognized that any changes in standards, site evaluation or system design, except alternative systems, must be done by amendments to this ordinance. These minimum standards apply to soils that are rated severe because of slow permeability and a seasonal high water table.
